SUPERMOISTURIZING

Intensive face and neck hydrating formula, for dry and dehydrated skin. Stimulates an intense aesthetic hydrating action, offering the skin softness, elasticity and tone.

eye contour gel
INTENSE MOISTURIZER

Fresh hydrating gel, designed to offer comfort to the delicate eye zone. Improves microcirculation, acting on bags under the eyes shadows.

AQUA+

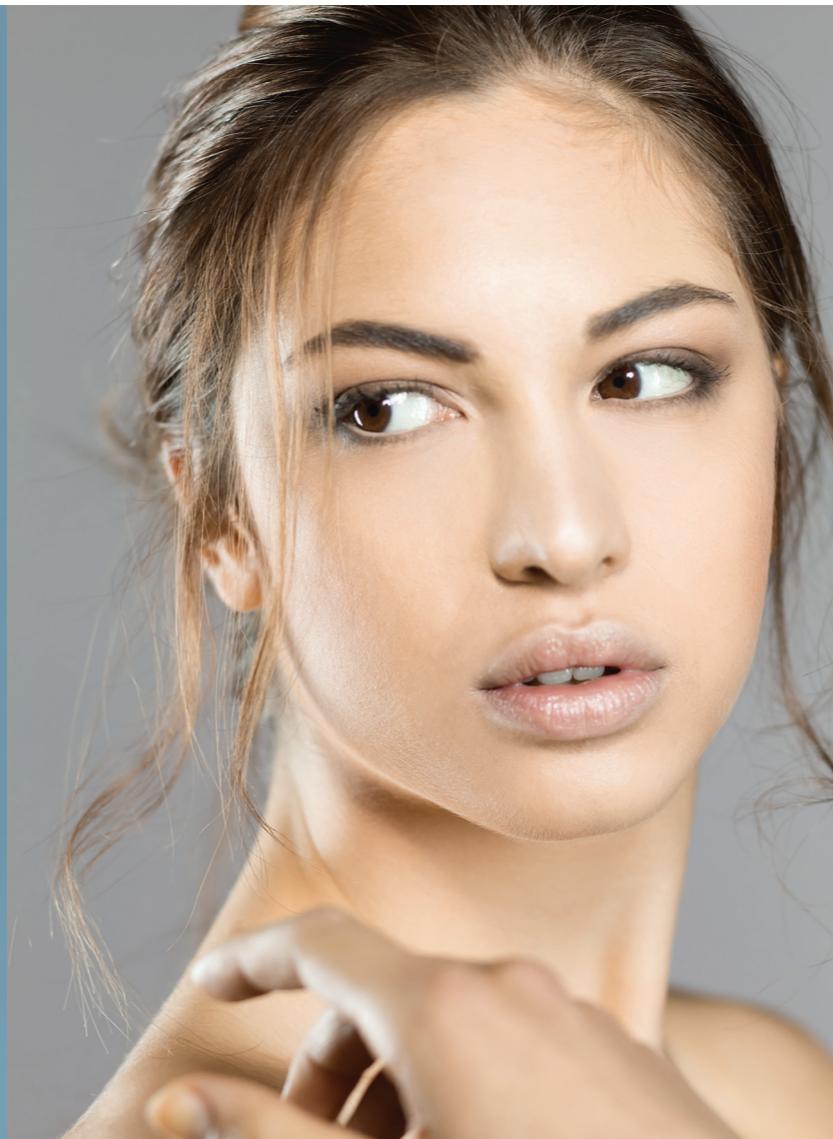

mask
INTENSE MOISTURIZER

Hydrating gel treatment suitable for all skin types, helps restore correct hydrating levels. Offers immediate comfort and softness.

cream
MOISTURIZING

Hydrating formula for the face and neck for young, normal and combination skin types, helps to maintain correct skin hydration levels.

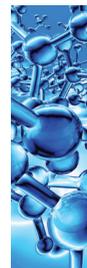

HYDRA INTENSIVE COMPLEX

3D hyaluronic acid, low molecular weight hyaluronic acid, gradual water release patch

3D hyaluronic acid
LONG LASTING HYDRATION

An innovative form of netting hyaluronic acid (3D cross linked) with a high-level of hydrating power, forms a surface film resistant against enzymatic degradation for long lasting hydration.

low molecular weight hyaluronic acid
DEEP HYDRATION

Similar to a molecular sponge, this form of hyaluronic acid is able to store large quantities of water. Thanks to its reduced dimensions, it penetrates the skin's layers, hydrating and improving the skin's elasticity.

gradual water release patch
WATER RESERVE

The latest innovation in skin hydration, this micro-network gradually releases a set of hydrating substances into the heart of the stratum corneum, restoring the skin's moisture balance.
